

FLOW SCIENCES COMPOUNDING PHARMACY ENCLOSURES

SAFE POWDER HANDLING SOLUTIONS

The Flow Sciences vented enclosure is essential to protect your health and ensures safety by containing powder and virtually eliminating exposure to potent powders.

4' CONTAINED VENTED ENCLOSURE
ID - ETA483024AAD

- SINGLE HEPA ENCLOSURES
- DUAL HEPA BAG-IN/BAG-OUT ENCLOSURES

USP 800

WHAT YOU NEED TO
KNOW TO BE COMPLIANT

USP 800 - EXPLAINED.

The new USP 800 standards can be confusing. Many compounders are asking what they need to do to be compliant. So you can better understand what you need to do to make your pharmacy USP 800 compliant, here is the information and explanations that you need.

Defining Terms:

C-PEC : Containment Primary Engineering Control. A ventilated device designed to minimize worker and environmental hazardous drug exposure when directly handling hazardous drugs.

C-SEC : Containment Secondary Engineering Control. The room in which the C-PEC is placed.

HD : Hazardous Drug. The toxic powder or active pharmaceutical ingredient being used.

HEPA : High-Efficiency Particulate Air. Filters designed to 99.995% filtration effectiveness

ACPH : Air Changes Per Hour. Complete air changes in a C-SEC, typically measured by cubic feet.

CVE : Contained Vented Enclosure. A containment enclosure that provides personnel and environmental protection.

Class I BSC : Biological Safety Cabinet. A containment enclosure that provides personnel and environmental protection.

Class II BSC or CACI : Compounding Aseptic Containment Isolator. A containment enclosure that provides personnel and environmental protection.

Now that we have defined some terms, lets look at the requirements for USP 800.

ENGINEERING CONTROLS FOR NONSTERILE HD COMPOUNDING

C-PEC MUST BE EXTERNALLY VENTED (PREFERRED) OR REDUNDANT HEPA FILTERED IN SERIES

When compounding with your C-PEC, the enclosure must vent out of the enclosure to house exhaust. Alternatively, the enclosure can have redundant HEPA filters (dual filters) in series. Flow Sciences builds both single HEPA and dual HEPA filter units.

C-SEC MUST HAVE 12 AIR CHANGES PER HOUR

The C-SEC (room) that the C-PEC (CVE) is in must have 12 air changes per hour. This means in a room that is 15' wide x 15' long x 8' tall, 1,800 cubic feet, there must be 21,600 cubic feet of air vented and exhausted in the room per hour.

C-PEC EXAMPLES : CVE, CLASS I OR II BIO SAFETY CABINET, OR COMPOUNDING ASEPTIC CONTAINMENT ISOLATOR

The Flow Sciences CVE Single and Dual HEPA Units.

C-SEC MUST BE EXTERNALLY VENTED

The vented air must be exhausted outside of the room through HEPA filtration.

C-SEC MUST HAVE NEGATIVE PRESSURE BETWEEN 0.01 AND 0.03 INCHES OF WATER COLUMN

The room itself must be under negative pressure to ensure containment.

SINGLE HEPA

HAZARDOUS / NON-HAZARDOUS NON-STERILE

Flow Sciences Contained Vented Enclosure with Single 4" HEPA filter and Fan

- Safe powder handling of HDs for personnel protection and reproducibility in sensitive application
- **THIMBLE CONNECTION** and **VENT KIT** required to connect CVE to the house exhaust system
- Stable airflow and **NO VIBRATION** on the work surface

- 1 Air handling system pumps conditioned air into the C-SEC
- 2 12 ACPH achieved by supplying and exhausting 21,600 cubic feet of air per hour (for 15' x 15' x 8' room)
- 3 C-PEC containment enclosure - Vented to house exhaust
- 4 Single 4" HEPA Filter - Fan - Thimble Connection
- 5 HEPA filtered air externally vented from the C-SEC (room)

DUAL HEPA

HAZARDOUS NON-STERILE

Flow Sciences Contained Vented Enclosure with Bag-In / Bag-Out Dual 4" HEPA Filters and Fan

- **RECIRCULATE** into your lab to save money by requiring less make-up air and not venting out conditioned air
- **FLEXIBILITY** with placement in lab. Recirculate and move enclosure without moving house exhaust drops.
- Stable airflow and **NO VIBRATION** on the work surface

- 1 Air handling system pumps conditioned air into the C-SEC
- 2 12 ACPH achieved by supplying and exhausting 21,600 cubic feet of air per hour (for 15' x 15' x 8' room)
- 3 C-PEC containment enclosure - Not connected to house exhaust to recirculate into room.
- 4 Dual HEPA Filtration - Two 4" HEPA Filters - Fan
- 5 HEPA filtered air externally vented from the C-SEC (room)

PRICE VS. COST OF OWNERSHIP

When considering a contained vented enclosure (CVE) for your pharmacy, we understand there are many factors to consider. One of the most important factors is cost of ownership. Unfortunately, the price tag of equipment does not tell the entire story when it comes to the significant investment that is being made. Flow Sciences is trusted by pharmacies across the world and is the exclusive provider of containment enclosures for many of the top 25 big pharma companies. The intuitive design, engineering controls, and quality of construction materials in Flow Sciences enclosures make these CVEs the most cost effective option.

SAVE MONEY.**

DUAL 4" PLEATED HEPA FILTRATION

OPTIONAL CONNECTION TO HOUSE EXHAUST SYSTEM

REMOVABLE PLUG FOR TESTING IN THE SAMPLING SPACE BETWEEN FILTERS

2

1

DUAL HEPA HAZARDOUS STERILE/NON-STERILE

ETA363024ABD

1 EXHAUST PORT

- 6" thimble connections to house system or can be recirculated back into the lab

2 FS1650 ALARM

- FS1650 Integrated Face Velocity Alarm alerts the operator when airflow is compromised. (Integrated with Dual Hepa Units)

3 OPTIONAL LED LIGHT

- LED lights available upon request

4 FRONT LIFT DOORS

- Hinged front doors that lift for easy loading or unloading of equipment

5 AIRFOILS

- Airfoils placed around the perimeter of the face opening stabilize the airflow, improve laminar airflow, and improve containment along the leading edge

6 DISHED BASE

- Dished phenolic base captures accidental liquid and powder spills

7 WASTE PORT

- Waste port can be placed on either and/or both sides of the enclosure and is used to safely remove waste. (Optional)

8 PLENUMS

- Rear and Top Plenums are used to direct airflow and maintain containment at the face opening. These also prevent particles from possibly falling back onto the work surface if the fan is turned off

9 BAG-IN / BAG-OUT

- HEPA change out system that allows for safe removal and replacement of the main 4" HEPA filter

SINGLE HEPA

NON-HAZARDOUS
NON-STERILE

1 EXHAUST PORT

- 6" thimble connections to house system or can be recirculated back into the lab

2 FS1650 ALARM

- FS1650 Integrated Face Velocity Alarm alerts the operator when airflow is compromised.

3 OPTIONAL LED LIGHT

- LED lights available upon request

4 FRONT LIFT DOOR

- Hinged front doors that lift for easy loading or unloading of equipment

5 AIRFOILS

- Airfoils staged around the perimeter of the face opening stabilize the airflow, improve laminar airflow, and improve containment along the leading edge

6 DISHED BASE

- Dished phenolic base captures accidental liquid and powder spills

7 WASTE PORT

- Waste port can be placed on either and/or both sides of the enclosure and is used to safely remove waste

8 PLENUMS

- Rear and Top Plenums are used to direct airflow and maintain containment at the face opening. These also prevent particles from possibly falling back onto the work surface if the fan is turned off

9 HEPA FILTER

- Single 4" thick HEPA filter and fan

CONNECTING TO HOUSE EXHAUST

A Flow Sciences' 4' wide enclosure exhausts approximately 225 CFM (at 75 linear feet per minute at the face opening).

Each house connection must pull 10% - 15% more CFM than the enclosure. The house CFM required for each enclosure is approximately 260 CFM.

For customers who already use Flow Sciences CVEs, you can still be compliant. To connect a single filter enclosure to house exhaust, you will need a thimble connection and vent kit for each top mount fan. Contact your Flow Sciences representative today to find out more.

(1) 6" EXHAUST PORT

THIMBLE

VENT KIT - (1) 8' LONG 6" HOSE W/ (2) CLAMPS

(2) 6" EXHAUST PORT

(2x) THIMBLES

(2X) VENT KITS

Flow Sciences' enclosures connect to house exhaust systems using a **THIMBLE CONNECTION**

VENT KIT

(1 ea- 6" x 8' flex hose; 2 ea- hose clamps)
